

Branch Manager Catalogue Management Walkthrough

Complete PRD Requirements Traceability, Navbar Navigation, Scoped View & Microservices Architecture

Executive Summary & Branch Manager Scoped Authority

The **Branch Manager Catalogue Management Module** mirrors the Admin Panel's Central Catalogue Management module in complete visual, architectural, and component fidelity across all 5 operational tabs (Service Categories, Services, Service Pricing, Staff Skills & Levels, Resources). To enforce multi-tenant enterprise governance, the Branch Manager interface operates in a strict **read-only view mode** with **branch-scoped visibility**: Branch Managers are restricted to inspecting categories and services created centrally by Brand Admin for **all branches** or **their assigned branch**, eliminating operational confusion and preventing unauthorized mutation of brand-wide treatment standards.

1. Official PRD Requirements Traceability Matrix

PRD REQUIREMENT ID	FEATURE NAME	PRODUCT REQUIREMENT DESCRIPTION	IMPLEMENTATION DETAILS IN CODE
SALO-PRD-CAT-001	Service Categories Hierarchy	Category grouping for salon departments (Hair, Skin, Spa, Nail, Bridal, Men's), display order weights, and activation/deactivation control.	Implemented in <code>ServiceCategoriesTab.tsx</code> with <code>catalogueApi.fetchCategories()</code> , dynamic count badges, and read-only detail inspection modal.
SALO-PRD-CAT-002	Master Service Catalogue & Envelopes	Comprehensive service registry with duration, pre/post buffer times, GST taxation rate, consultation flags, and online booking visibility.	Implemented in <code>ServicesTab.tsx</code> with dynamic category dropdowns, full DB pagination, and comprehensive specification inspection modal.
SALO-PRD-CAT-003	Multi-Branch Tariff & Price Overrides	Dynamic pricing matrix distinguishing HQ central baseline tariffs from location-specific price overrides with live variance delta calculations.	Implemented in <code>ServicePricingTab.tsx</code> with live delta calculations, breakdown inspection modal, and branch lock filters.
SALO-PRD-CAT-004	Physical Salon Resources & Station Allocation	Treatment suite rooms, hydraulic styling chairs, and specialized laser/hydra machines allocated per branch to eliminate double-booking.	Implemented in <code>ResourcesTab.tsx</code> with endpoints in <code>organization-service</code> , resource status switches, and view modal overlays.
SALO-PRD-CAT-005	Competency Prerequisites & Skill Tiers	Staff certification tiers (Junior, Intermediate, Senior, Expert) linked to service execution eligibility and commission multiplier scaling.	Implemented in <code>StaffSkillsLevelsTab.tsx</code> with skill matrices, experience requirements, and branch assignment dossiers.
SALO-PRD-CAT-006	Branch Manager Navbar & Scoped Read-Only View	Direct top navbar entry for Branch Manager panel to access master catalogue; strict read-only mode hiding all Add/Edit/Delete/Seed mutations; visibility scoped strictly to services created for all branches or that particular branch.	Implemented in <code>TopNavbar.tsx</code> , <code>CatalogueMasterPage.tsx</code> , and <code>ServicesTab.tsx</code> via <code>readOnly={true}</code> and <code>isTargetBranch / isAllBranches</code> scoped branch filter.

PRD Requirement ID	Feature Name	Product Requirement Description	Implementation Details in Code
SALO-PRD-CAT-007	Dedicated Database Column for Branch Assignment Tracking	PostgreSQL column in service_masters (available_branches text[]) and sync with service_branch_prices table when creating/updating services; seamless role-based read permission handling for branch managers.	Implemented in PostgreSQL table service_masters, Prisma schema, service.repository.ts, permission.middleware.ts, and synchronized on service save/edit.

2. Business Rationale & Why We Implemented Everything

Every component, modal input, and metric in the Catalogue Management module directly addresses high-impact operational friction points encountered in multi-location salon and spa chains:

- **Dedicated Catalogue Navbar Navigation for Branch Managers:** Front-desk operations and shift managers frequently need to consult exact service procedures, buffer cushions, patch test mandates, and pricing tariffs during day-to-day appointments and walk-in intake. Having "Catalogue" directly in the top navbar provides instant 1-click access without digging through settings.
- **Read-Only Governance Protection:** Brand consistency across multi-unit franchise chains relies on centralized service definitions. If individual branch managers could modify base prices, alter tax rates, or delete core services, pricing discrepancies and brand dilution would occur. Read-only view preserves HQ central authority while empowering branch managers with full operational visibility.
- **Branch-Specific Scoping (All Branches + Assigned Branch):** Salons often have branch-exclusive treatments (e.g., specialized laser therapies available only at flagship suites). Showing irrelevant services from distant regional branches causes frontline confusion. Scoping the catalogue to services created for "all branches" or "that particular branch" delivers a tailored, noise-free experience.
- **Buffer Timing Envelopes (Pre & Post Service):** Without buffer minutes, appointment calendars stack back-to-back, causing severe salon floor delays when hair washing, station sanitization, or dye mixing take extra time. Buffers automate station turnover.
- **Physical Asset Locking (Rooms, Chairs, Equipment):** Multi-stylist conflicts frequently happen when two aesthetic therapists book HydraFacial machine sessions or the single private bridal suite at the exact same hour. The Physical Resource Allocation Registry eliminates scheduling collisions at the database layer.
- **Export Utility for Local Operations:** Branch Managers can export service menus and tariffs as CSV/spreadsheets using standard purple outline export buttons to print treatment menus or share price references with receptionists.

3. UI Architecture & Page Flow

The master module page (`CatalogueMasterPage.tsx`) hosts a responsive 5-tab scroll navigation bar with live status pills and header metric counters:

- **Top Navigation Bar:** Directly displays Catalogue in desktop center navigation and in the mobile drawer with a distinct View Only pill indicator.
- **Tab 1: Service Categories:** Department listing table showing total services, display sort order, status badges, and an Eye icon action button to inspect department dossiers without edit/delete controls.
- **Tab 2: Services Menu:** Filterable by category, status, and branch. Exclusively renders services published by Admin for all branches or the manager's assigned branch. Action column features full specification viewing modal covering durations, buffers, required staff skills, and BOM consumable recipes.
- **Tab 3: Service Pricing:** Cross-branch comparison matrix showing computed price difference badges (+₹400, -₹200, 0.0% Equal) and detailed breakdown modal.
- **Tab 4: Staff Skills & Levels:** Competency tier cards, certification prerequisites, and stylist certification rosters.
- **Tab 5: Salon Resources:** Physical room, chair, and device allocation registry scoped to the branch location.

Database Compliance Notice

All data operations respect the Database-Per-Service mandate. Catalogue services, prices, and categories persist exclusively to `commerce_db`. Branch resources and physical locations persist exclusively to `organization_db`. All requests are authenticated and scoped via the API Gateway using JWT tenant claims.
