

Brand Owner / Head Office → Roles & Permissions Governance Module

System Walkthrough, Architectural Specification & Implementation Traceability Matrix

Executive Architectural Summary: The Roles & Permissions section provides centralized Role-Based Access Control (RBAC) governance for the Brand Owner / Head Office across 9 default system personas, custom salon roles, a 14-module × 6-permission interactive matrix (View, Create, Edit, Delete, Approve, Export), active staff credential assignments across 6 network salons, and maker-checker approval audit trails.

1. Official PRD Traceability Matrix

Mapping all official product requirements to their concrete implementation within the codebase:

PRD Requirement ID	Feature Name	Product Requirement Description	Implementation Details in Code
SALO-PRD-107	Roles Master Directory	System & Custom role register, user counts, scope controls, and permissions count.	RolesListTab.tsx: Filterable roles table, type switcher (System vs Custom), and quick action controls.
SALO-PRD-108	9 Default System Personas	Brand Owner, Admin, Branch Manager, Reception, Stylist, Storekeeper, Finance, Call Centre, Franchise.	RolesListTab.tsx: 9 permanent system roles with protected deletion rules and tailored scopes.
SALO-PRD-109	Create / Edit Custom Role	Frontend modal defining role identity, operational mandate, and organizational scope.	CreateEditRoleModal.tsx: Portaled modal with required validation and direct matrix routing.
SALO-PRD-110	Role Profile Dossier	Inspection modal with 4 summary KPI cards, description, module pills, and clone tool.	RoleDossierModal.tsx: Role profile modal with 1-click duplicate action and status toggle.
SALO-PRD-111	Interactive Permission Matrix	Core matrix: 14 Modules × 6 Permission Types (View, Create, Edit, Delete, Approve, Export).	PermissionMatrixTab.tsx: Dynamic interactive grid with sticky columns, check toggles, and live updates.
SALO-PRD-112	5-Tier Permission Grouping	Expandable groups: Core (1), Business (5), Administration (5), Analytics (1), Configuration (2).	PermissionMatrixTab.tsx: Collapsible headers grouping 14 modules with module count badges.
SALO-PRD-113	Bulk Matrix Controls	Shortcuts for All View, All Create, All Edit, All Approve, All Export, and Module Select-All.	PermissionMatrixTab.tsx: 1-click bulk toggle bar and module row mass selectors.
SALO-PRD-114	Safety Confirmation Dialogs	Confirmation modals before granting sensitive permissions (Finance, Settings, Bulk).	PermissionMatrixTab.tsx: Portaled security dialog detailing impact before granting sensitive permissions.
SALO-PRD-115	Staff Role Assignments Ledger	Mapping active staff credentials to system roles, employee IDs, and branch scopes.	RoleAssignmentsTab.tsx: Filterable staff roster with Change Role and Revoke actions.
SALO-PRD-116	Assignment Details Dossier	User profile modal with inherited permissions breakdown and branch scope	AssignmentDossierModal.tsx: Portaled dossier displaying contact details

PRD REQUIREMENT ID	FEATURE NAME	PRODUCT REQUIREMENT DESCRIPTION	IMPLEMENTATION DETAILS IN CODE
		boundaries.	and inherited policy rules.
SALO-PRD-117	Permission Change History	Immutable audit log tracking role, module, previous value, new value, and author.	PermissionHistoryTab.tsx: Audit table with before/after delta values and timestamp verification.
SALO-PRD-118	Maker-Checker Approval Flow	Approval workflow UI for sensitive permission modifications with Approve/Reject actions.	PermissionHistoryTab.tsx: Approval state badges and Permission Delta Dossier modal.

2. Business Rationale & Why We Implemented Everything

A detailed rationale explaining the commercial need and architectural choices for each capability:

1. Why Centralized RBAC Matrix without Backend Enforcement?

Brand Owners managing 97 staff across 6 salons need immediate visual clarity over who has access to customer phone numbers, invoices, and discount approvals before signing off on operational policies.

2. Why 9 Default Personas & Custom Role Clones?

Standard roles (Branch Manager, Reception, Stylist) cover 90% of daily workflows, while specialized bridal leads or colorist supervisors require custom elevated privileges without altering standard presets.

3. Why 5 Expandable Module Groups with Sticky Columns?

A 14-module × 6-permission table has 84 distinct toggle cells. Grouping them by Core, Business, Admin, Analytics, and Configuration prevents cognitive overload and keeps the matrix intuitive on desktop and tablet.

4. Why Safety Confirmation for Sensitive Permissions?

Accidentally granting Delete or Finance access to junior staff introduces compliance risk. Portaled security confirmation prompts force deliberate executive verification.

5. Why Inherited Permissions in Staff Assignment Dossier?

Staff members inherit permissions from their role. The assignment dossier makes it crystal clear what actions a specific stylist or receptionist can perform at their assigned branch.

6. Why Maker-Checker Approval Trail for Permission Deltas?

Enterprise ISO & SOC2 standards require dual-authorization for security privilege escalations. The maker-checker workflow allows branch managers to request changes and HQ CFOs to approve them.

3. UI Architecture & Page Navigation Flow

The Roles & Permissions module is structured under a unified responsive master container with persistent sub-navigation:

- **Roles Directory (/roles-permissions?tab=roles):** Master system & custom roles table, user counts, Create Role modal, and Role Dossier modal.
- **Permission Matrix (/roles-permissions?tab=matrix):** Role selector, 5 collapsible module groups, 6 permission types, and bulk shortcuts.
- **Role Assignments (/roles-permissions?tab=assignments):** Staff credential ledger, branch scope filters, Change Role modal, and Assignment Dossier.
- **Permission History (/roles-permissions?tab=history):** Immutable configuration change log, maker-checker approval actions, and Delta Dossier.
